Customer onboarding journey

Your Salesmsg onboarding journey

Five stages from sign-up to first text — no surprises, go live faster.

~20 days sign-up to live

typical timeline for a new organization

What to expect

Not instant — and that's good. Because U.S. and Canadian carriers regulate business texting to stop spam, every business must be registered and approved before a single message can send. This guide walks you through all five stages, what your team needs to do, and how to move as fast as possible.

We handle the paperwork. Your Onboarding Manager prepares and submits the carrier registration for you. Depending on your plan, a dedicated Customer Success Manager supports you through to go-live.

Stage 1 — Welcome & kickoff · Day 0–3

You sign up and are matched with an Onboarding Manager for a kickoff call to set your goals and plan.

What you'll do	Share your use case, user count, phone numbers, integrations and target go-live date.
Done when	Kickoff complete; onboarding plan and recap delivered.

Carriers decide approval, not Salesmsg

You can't send texts until your business is registered and approved by the carriers (10DLC or Toll-Free). Approval takes several business days — sometimes longer. Brand-new EINs can take 30–90 days to become verifiable.

Customer onboarding journey

Compliance and account setup

The gate you must clear, and the configuration we run in parallel.

Stage 2 — Compliance & registration · The gate

We register your business with the carriers: 10DLC for local numbers, or Toll-Free Verification for toll-free and Canadian numbers. We manage the entire carrier review.

Legal name + EIN	Must exactly match your IRS records.
Website & policies	Active site with Privacy Policy (including SMS consent language) and Terms.
Opt-in method	Web form, paper form, text-to-join keyword, or QR code.
Use case + samples	Clear description of what you'll text plus a couple of real example messages.
Done when	Brand and Campaign approved by carriers; sending unlocked on your account.

Stage 3 — Account setup · In parallel

We configure your account while compliance runs — confirm your users, numbers and integrations.

Phone numbers	Get new local numbers, or transfer, port or host your existing numbers.
Users	Added and mapped to inboxes with assignment rules and business hours.
Integrations	Connect your CRM (e.g. HubSpot) and tools like Aircall or RingCentral.
Done when	Numbers, users and integrations are live; test message sends successfully.

Accurate info is your fastest path

The single biggest way to go live faster is to get us your business details early and accurate. If anything is rejected, we tell you exactly what to fix and resubmit for you.

Customer onboarding journey

Training and go-live support

How we train your team and what to expect on launch day.

Stage 4 — Training · Before launch

We train your team so adoption sticks — a 1:1 admin session and a group session for your users.

Admin training	1:1 session covering setup, workflows and your CRM integration.
User training	Group session: 1:1 texting, broadcasts, tags, contacts and calling.
Always available	Weekly live webinar series and Help Center, any time you need them.
Done when	Admins and users trained; recap resources and recording delivered.

Stage 5 — Go-live & ongoing support · ~Day 20+

You launch. We check in on go-live morning, then follow up two weeks later to confirm your KPIs.

Go-live day	We check in the morning to confirm everyone is set.
Two weeks later	Follow-up to clear blockers and confirm the KPIs you're measuring.
Done when	Live, measured, on a regular cadence with your Customer Success team.

Not sure where you stand?

Your Onboarding Manager and Customer Success Manager can tell you exactly which stage you're in and what's outstanding — ask any time.

Customer onboarding journey

Your prep checklist and quick answers

Have these ready before Stage 2 and you'll go live faster.

Get live faster — have these ready before Stage 2

Legal name + EIN	Exactly as they appear on your IRS documents.
Business website	Active site with Privacy Policy (SMS consent language) and Terms.
Opt-in method	Screenshot or link: web form, paper form, keyword, or QR code.
Use case + samples	What you'll send and a couple of real example messages.
Users and numbers	Who needs access; whether you're bringing existing numbers.
Integrations	The CRM and tools you want connected.

Quick answers

Why can't we just start texting right away?

U.S. and Canadian carriers require registration (10DLC or Toll-Free) to fight spam. Until approved, carriers block business texts.

How long does compliance take?

Often several business days once submitted — sometimes longer if carriers request changes or your EIN is newly issued.

We're in Canada — is anything different?

Yes. Canadian numbers must use Toll-Free Verification; 10DLC isn't available in Canada. We'll guide you through it.

Can we keep our existing phone numbers?

In most cases, yes. Numbers can be transferred, ported, or hosted during Account Setup — just let us know.
