Number porting how-to

Port your number to Salesmessage

Bring the number your customers already know — texting and calling.

Typical timeline: 2-4 weeks

Your current provider controls most of that timeline.

Porting or hosting — pick the right one

Two ways to bring a number into Salesmessage. Keeping your phone system and adding texting? Choose hosting. Want Salesmessage handling calls too? Choose porting.

Porting — move everything

2-4 weeks

- Texting and calling move over
- You leave your current provider
- Billed at Salesmessage rates

Hosting — texting only

2-3 business days

- Only texting comes over
- Calling stays where it is
- Keep your phone system

Not sure where to start? Ask your Onboarding Manager or Customer Success Manager — we'll tell you which path fits.

Keep your current service active

Don't cancel with your current provider until the port is fully complete. Cancelling early is the most common cause of delays.

What you need before you start

Having everything ready before you submit keeps the port moving.

Anything missing or mismatched sends the request back to the start.

Phone number(s)	Every number you want to move — local, toll-free, VoIP and landline all work.
Account info	Account number and PIN from your current provider. No PIN? Use the last four of the SSN.
Name & address	Company name (business) or first and last name (personal), plus the full service address.
Signed LOA	Letter of Authorization, signed and returned as a PDF to authorize the port request.
Proof of ownership	A bill from the last 30 days showing the number, or a screenshot from your provider.

Match your provider's records

A shortened business name or an old address is enough to get the port rejected. Check every detail before you submit.

How to port your number

Five steps to follow, plus special cases to know about.

1. Gather documents	Collect your account details, the signed LOA and your proof of ownership.
2. Confirm compliance	Local U.S. numbers need A2P 10DLC approval in your Salesmessage account, or texts get filtered.
3. Keep number active	Don't cancel your current service — a disconnected number can't be ported.
4. Submit request	Send everything via the porting request form, live chat or support@salesmessage.com.
5. Reply quickly	If carriers request a correction, a same-day reply from you can save a week.

Special cases

Verizon numbers	One number per port request only. We'll process multiples separately.
Google Voice	Unlock in settings first. Keep active throughout the port.
Twilio numbers	Separate, faster path — about 3-5 business days.
Personal mobile	Not recommended — your phone loses its number during setup. Ask about alternatives.

What happens behind the scenes

Salesmessage is the winning carrier and your current provider the losing carrier. Once you send your details, we drive the request and keep you posted.

After the port — what to expect

What changes once your number arrives in Salesmessage.

Message history	Doesn't come with it. Only new messages and calls appear in Salesmessage.
Local U.S. sync	May need up to 3 business days for 10DLC sync. Error 30034 resolves itself.
Toll-free numbers	Must be verified in Salesmessage before sending texts.
10DLC approval	Doesn't transfer. Once your Salesmessage account is approved, additional local numbers are covered.

Quick answers

Does it cost anything to port a number in?

No fee to port. Additional lines are $5 per month each.

Will we lose service during the port?

No. Your number stays with your current provider until the port completes.

What if we want to port out later?

Your new provider starts the request. Keep your subscription active and ask us for your CSR.
