salesmsg

Customer guide

Port your number to Salesmsg

Bring the number your customers already know -- texting and calling.

Porting takes about 2-4 weeks, and your current provider controls most of that timeline. Keep your number active with them until the port is finished -- cancelling early is the most common cause of delays.

01 Porting or hosting

Two ways to bring a number into Salesmsg. Keeping your phone system and adding texting? Choose hosting. Want Salesmsg handling calls too? Choose porting. Not sure? Ask your Onboarding Manager.

Porting	Texting and calling move to Salesmsg. You leave your provider. Takes 2-4 weeks.
Hosting	Only texting comes to Salesmsg. Calling stays where it is. Takes 2-3 business days.

02 What to gather first

Having everything ready before you submit keeps the port moving. Anything missing or mismatched sends the request back to the start.

Phone number(s)	Every number you want to move -- local, toll-free, VoIP and landline.
Account info	Account number and PIN from your current provider. No PIN? Last four of the SSN.
Name & address	Company name or first/last name, plus the full service address.
Signed LOA	Letter of Authorization, signed and returned as a PDF.
Proof of ownership	A bill from the last 30 days showing the number, or a provider screenshot.

03 Match your provider's records

The name, address and account number on your request are checked against what your current provider has on file. A shortened business name or an old address is enough to get the port rejected. Check every detail before you submit.

04 How to port your number

Five steps from start to finish.

1. Gather documents	Collect account details, signed LOA and proof of ownership.
2. Confirm compliance	Local U.S. numbers need A2P 10DLC approval in your Salesmsg account.
3. Keep number active	Don't cancel your current service -- a disconnected number can't be ported.
4. Submit request	Send via the porting form, live chat or support@salesmessage.com.
5. Reply quickly	If carriers request a correction, a same-day reply can save a week.

05 Special cases

Verizon	One number per port request. We'll process multiples separately.
Google Voice	Unlock in settings first. Keep active throughout the port.
Twilio	Separate, faster path -- about 3-5 business days.
Personal mobile	Not recommended -- your phone loses its number during setup.

06 After the port

Message history	Doesn't come with it. Export from your old provider first.
Local U.S. sync	May need up to 3 business days for 10DLC sync. Error 30034 resolves itself.
Toll-free numbers	Must be verified in Salesmsg before sending texts.
10DLC approval	Doesn't transfer. Once your Salesmsg account is approved, new numbers are covered.

07 Quick answers

- No fee to port. Additional lines are $5 per month each.
- Your number stays active with your current provider until the port completes.
- To port out later, your new provider starts the request. Ask us for your CSR.
