01 / QUICK START

Your first day on Salesmessage

Five steps from your invite to your first real conversation.

Setup time = about 20 minutes

Your organization is already registered and approved with the carriers.

Get set up

1. Accept your invite Open the invitation email from Salesmessage, click the link, and set your password. Done when: you're logged in and can see your company's workspace and your inbox.

2. Get your contacts in Add one contact by hand, or import your list. You can't text anyone until someone's in here — this is the step people most often skip. Done when: at least one person you actually plan to text is in your contacts.

3. Send your first text Only message people who agreed to hear from you — a phone number in your CRM isn't permission to text. Pick a contact, write something real rather than a test, and send. Done when: your message shows as delivered.

> **Importing contacts from HubSpot?**
>
> Your contacts don't all arrive at once. They come across as they're used: searched for, opened in the Salesmessage panel, or run through a workflow. Ask your admin about bringing your list over in bulk.

Texts cost credits

Typical text

160 characters

per credit, roughly

Emoji or curly quote

70 characters

per credit, doubling the cost

A curly quote pasted from Word counts too

02 / QUICK START

Finish setup and fix problems

Steps 4 and 5, plus what to do if something doesn't work.

Finish your setup

4. Reply and respond Ask a colleague to text your Salesmessage number, then reply from your inbox. It proves messages reach you as well as leave you. Done when: you've received an inbound message, got a notification for it, and replied.

5. Work from anywhere Install the mobile app so you're reachable away from your desk, and the Chrome extension if you text from your browser. Done when: you can see the same conversations everywhere you work.

> **HubSpot: two things only you can do**
>
> Add the Salesmsg App Card in your HubSpot settings — it won't appear on contact records until you do. Check your HubSpot user is mapped to your Salesmessage user; unmapped users can't send.

If something doesn't work

Your message didn't deliver?

Usually the number or the message content. Send your admin the contact and the time — they can see the delivery status.

No notification for an inbound?

Check your notification settings first, then your phone's. Still nothing, tell your admin which inbox.

No App Card in HubSpot?

You have to add it yourself (see the HubSpot box above). Still won't send? Your admin can map you.

Stuck on any of this? Ask your account admin first — most of it they can fix in a minute. For anything else, the Help Center is at help.salesmessage.com, or email us.
